01

THE PROBLEM

Small business owners receive supplier bills as photos on whatsapp, PDFs and paper receipts in Chinese or English and have to check them by hand and spend hours on end which has limitations:

- manual processes and human error
- compliance pressure and regulatory changes
- limited manpower and rising costs

This limits their productivity and slows business growth

VISION TO SOLUTION

02

INVOICE AUTOMATION SOFTWARES

Automation software can help manage:

- Recording transactions
- Processing invoices
- Following up on late payments
- Manage vendor bills and approvals
- Bank reconciliation
- Expense tracking
- Generating financial reports

01 **Automated Data Capture**
This eliminates duplicate data entry and simplifies end-of-month reporting.

02 **Data Mapping and Cleansing**
Automation helps flag incomplete or inconsistent data early, reducing delays and improving accuracy.

03 **Human Approval**
Staff reviews flagged fields in plain language. An owner or manager approves. Uncertain items go to a human.

WHY NOW?

GAPS WITH EXISTING INVOICE AUTOMATION SOFTWARE

1. **Upstream AI Document Capture & Multilingual Processing**

Most local systems excel at the general ledger but require manual entry of data for an invoice. Crucially, they fail to extract text from Mandarin-language supplier invoices, handwritten Malay receipts, or mixed formats.

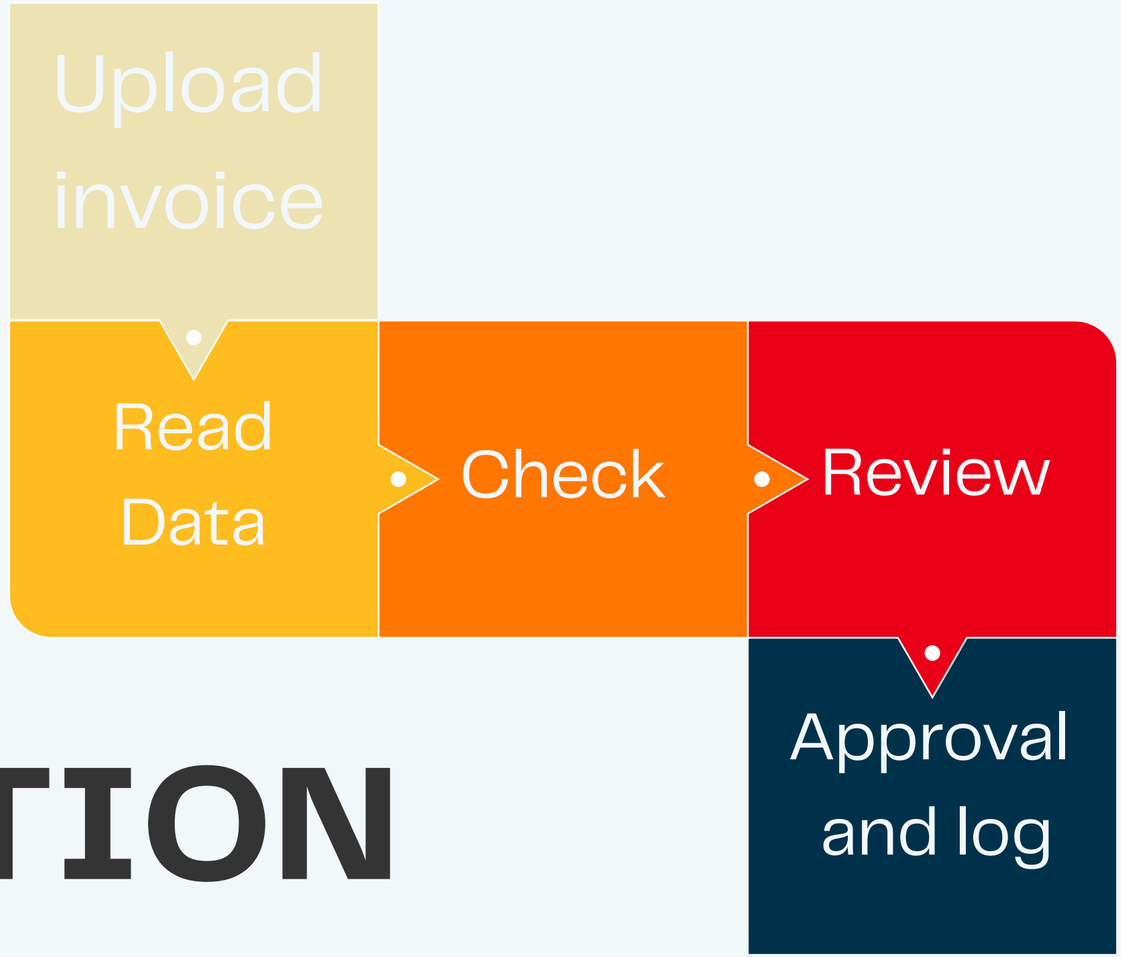

2. **Operational Resiliency (Rate-Limiting & Queueing)**

Generic invoicing software often lacks built-in submission queueing or retry logic. During peak periods like month-end or high-volume retail campaigns, these systems crash forcing finance teams to resubmit duplicates manually.

3. **Smart Workflows for Complex Local Scenarios**

Current solutions struggle heavily with complex Malaysian workflows such as self-billed e-invoices for foreign suppliers, multi-currency cross-border transactions, staff claims/reimbursements, and consolidated monthly B2C bulk invoicing.

04

THE IDEATION JOURNEY

TECHNOLOGY IS THE KEY TO STREAMLINING THIS TRANSITION, ENABLING EFFICIENT AND ACCURATE E-INVOICE SUBMISSION.

A VISUAL ODYSSEY

MAPPING OUR THOUGHTS

1 Goal: **show that the core workflow works.**

2 Goal: **make it a real hub app.**

3 Goal**: prove it saves time with real businesses.**

- Features: supplier memory accuracy dashboard in-app guidance for first-time users; feedback button; consent and data-retention settings.

4 Goal: **turn approved records into the next useful step.**

- Features: due-date list, price-change alerts with the evidence shown; period readiness view, export to common accounting software.

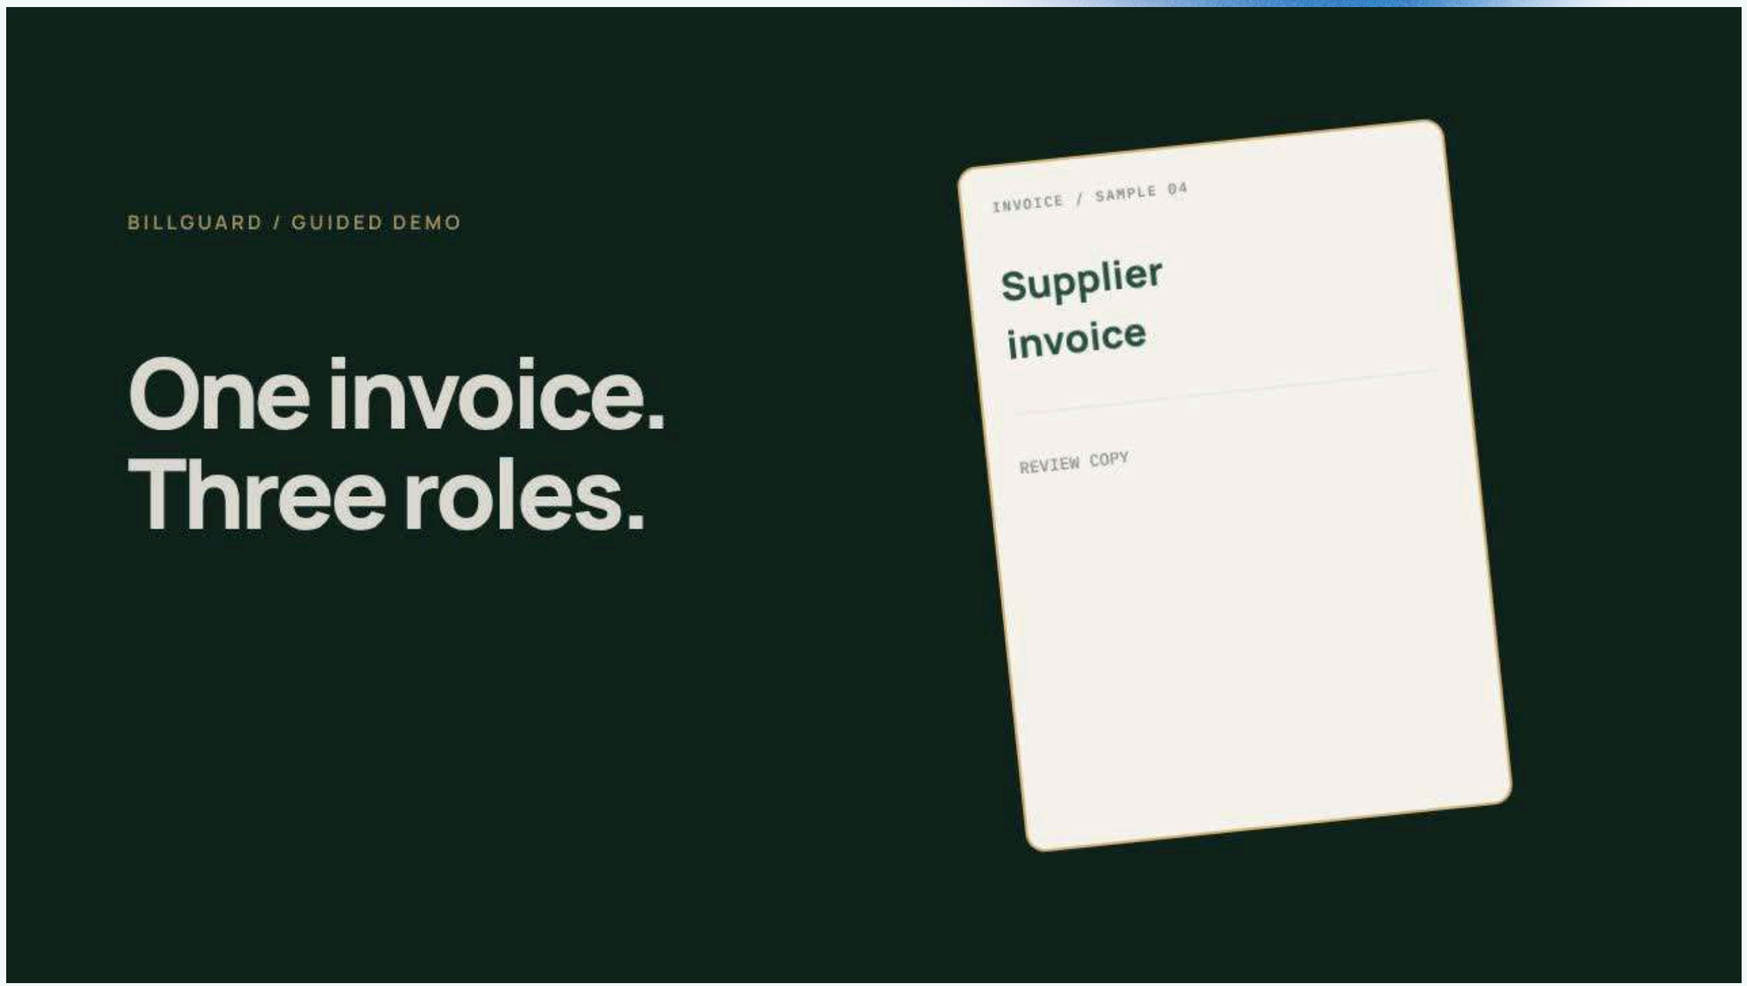

5 Goal: **let other people build on it.**

- Features: extraction and validation API for other Orbyte apps; events other apps can subscribe to.

6 Goal: **widen what it handles and where it works.**

- Features: preparation of the SME's own sales invoices, if regulations and demand support it; more document types, using swapped-in rule packs and languages; partner integrations

WORKING DEMO

07

EXPECTED IMPACT

For the business

- Time saved
- Errors caught before they spread
- Consistency
- Fewer tasks needing training

For the people using it

- Owners spend less time re-checking bills at night and have a record of who approved what.
- Staff with low digital confidence get plain-language explanations instead of cryptic errors.
- Accountants receive cleaner records, so they spend time on judgement and less on correcting typos.
- Accountability improves: roles, approvals and the log make it clear who did what.

For society (SDG contribution)

- SDG 8.2: higher productivity through technology and innovation. Your product removes manual work from a routine task.
- SDG 8.3: support for micro and small enterprises. You offer a low-cost tool that needs little training, in the languages they actually use.
- SDG 9 (supporting): it brings digital infrastructure to small businesses that can’t afford custom systems.

A BALANCED PERSPECTIVE

A SWOT ANALYSIS

STRENGTH

- Clear, specific problem.
- Human control built in.
- AI used only where it helps.
- Privacy-minded.
- Hub-native design.
- Local fit.
- Tax returns

WEAKNESS

- OCR accuracy is the hardest risk.
- Demo-grade security.
- Rules are your responsibility.

OPPORTUNITY

- Changing regulations.
- Orbyte's ecosystem.
- Accountants as a channel.
- Platform potential.
- Expansion.
- Improves with use.

THREAT

- Regulatory change.
- Trust and liability.
- Slow adoption.

THANK YOU
